

ESSENTIALS TEMPLATE FOR REVIT

Are you making the move to Revit, or currently using Revit but experiencing some growing pains? You may need a good Revit template. We can help.

Every new Revit project starts from a template, and a solid Revit template will give you a strong foundation to take advantage of efficiencies and consistency in your building design projects. The out-of-the-box template that comes with Revit only has a fraction of what is needed for a modern design project. CADD's Essentials Templates for Revit can give your Revit projects a head start and add to the professionalism of your practice.

Created by CADD's consultants - based on decades of experience working directly with countless firms - the best practices and time savers built into our templates truly represent the essential needs of getting Revit projects and a Revit transition off to a strong start. Of course, if you'd like to customize this template for your needs, we can do that too!

Our Revit Template Includes

- Dozens of views organized by need: working, printing, and coordination
- Custom View Templates aligned with drawing types
- Purpose-built View Filters applied at the appropriate view
- Working and printing views to speed up design and documentation
- Revit content that is created and named with consistency

Disciplines

CADD has created templates for various disciplines, with specific items for each one:

- Architecture
- Mechanical and Plumbing
- Electrical

By working with our team of expert consultants, and leveraging our direct partnership with Autodesk, you can rest assured that you have the very best team of people focused on helping you maximize your software investment. Get in touch with us to learn more about our Essentials Template for Revit.
