

COORDINATION ASSISTANCE

YOUR CLIENTS ARE ASKING FOR BIM MODELS - ARE YOU READY?

As 3D digital design models become the norm, more and more owners expect properly coordinated and vetted designs before breaking ground. The cost and time saving can be huge, with less confusion on a job site and fewer change orders from the field but only if your models have been clash coordinated properly.

WE KNOW THE RIGHT TOOLS TO USE

Different firms and subcontractors use different software for their role in a project. We have the tools needed to consolidate those models and look for issues before you break ground.

WE CAN CHECK FOR ISSUES BEFORE THEY ARE ISSUES

We'll leverage your BIM models to look for clashes and report on them during design. We can review the issues with you and generate reports of the problems that you can take back to your team for resolution.

Let us work with your team
before you break ground.
